The EU faces many challenges. Nurses and nursing are part of the solution. It looks like the EU citizens have enough of the nice talks of politicians, enough of their political promises prior election. Therefore, it is important civil society, nurses ask themselves in which world they want to live and work; how nursing need to push for change in the changing world; and what should be in for nurses who provide daily care for the most vulnerable in our complex society. But when moving forward, the main question for many citizens will be: the EU, what's in it for me? Indeed, since 2008, when the financial crisis hit ordinary EU citizens very hard, especially nurses and women, more challenges to daily survival started to surface. Is the EU, its institutions, its political games, just a complex political labyrinth nobody wants to understand? Are EU civil sevants simply producing legislation in view of their own created cocoon, far away from daily reality? But how can we bring ordinary EU citizens closer to the European project, its solutions? Nurses, women, play a key role in making the EU, health & wellbeing, prosperity and peace work for Eu citizens, trusting nurses most!

Paul De Raeve

The European Union, what's in it for me?

As Registered Nurse (1984), Master Nursing Science (1989-VUB) and Statistics (1996-KUB), followed by his PhD at Kings College London (2014), Paul became EFN Secretary General from 2002, lobby the EU Commission, Parliament and Council and recently (2016) started designing within the ENRF a nursing research and innovation agenda.

# **EU Lobby Strategies Fitting** a New Political Context

Paul De Raeve, 2017

This book builds on concrete achievements of the nursing community, its leaders to move the European political agenda, to advance nursing in such a way that it delivers concrete benefits for EU citizens.

## Read the book ONLINE:

https://online.anyflip.com/eumpx/
ugmb/mobile/index.html

The changing EU economic and political context implies adapting to this changing environment, including our lobby strategies to pro-actively set the nursing agenda. The EU institutions, its political machinery, has become a complex political labyrinth in which public consultations are not enough to build trust with its citizens. Putting civil society into the cloud to meet and produce statement is the new window dressing which does not facilitate the design of a social Europe. This book is building on concrete achievements of the nursing community, its leaders to move the European political agenda, to advance nursing in such a way that it delivers concrete benefits for EU citizens. The nurses' European project, be it political, professional, scientific, is a movement built since 1967, when the Commission started drafting the free movement Directive. EU legislation protected and stimulated the development of nursing as a profession. However, as lobby strategies are drying up, civil society being excluded from policy design, we need to reflect on how to influence better EU politics and policies. The world changed in 2017 and more changes are to come, for the better, the worse!

Paul De Raeve

As Registered Nurse (1984), Paul has a Master in Nursing Science (1989-VUB) and Statistics (1996-KUB) and a PhD from Kings College London (2014), being the first EFN Secretary General since 2002, lobbying the EU Commission, Parliament and Council on behalf of 3 million nurses in the EU. Paul focusses on developing EFN and ENFF in synergy.

# **Principle of subsidiarity**

The principles of subsidiarity and proportionality govern the exercise of the EU's competences. In areas in which the EU does not have exclusive competence, the principle of subsidiarity seeks to safeguard the ability of the Member States to take decisions and action and authorises intervention by the Union when the objectives of an action cannot be sufficiently achieved by the Member States, but can be better achieved at Union level (ref. Article 10(3) of the Treaty of the European Union).

### **EFN Policy Statement on** Nurses Digital Competencies

The EFN recognises the importance of improving the nursing workforce digital competencies to reduce the currently existing gap between digital technology trends and their effective use for direct patient care, especially for patients with multiple chronic conditions.

To develop the digital competencies of the entire EU nursing workforce stakeholders, need a better understanding of the digital competencies gap and opportunities when reforming healthcare systems. It is necessary to strengthen education curricula, especially when updating the 2013/55/EU Annexe V and making full use of Lifelong Learning (LLL) programmes. Moreover, this would be a way of guaranteeing that the nursing profession, in their daily activities, is compliant with the EU's General Data Protection Regulation by design and by default.

Within this EU context, the EFN calls stakeholders and EU institutions to:

- Ensure that nurses, as healthcare professionals, embrace digitalisation to improve direct
- Embrace and upgrade the entire nursing workforce digital competencies to manage and/or deliver preventive measures and care to patients and citizens while following technological
- Up-scale and effectively integrate digital competencies into the nurses' education and training programmes at both undergraduate and postgraduate level as well as through
- Develop and maintain a coherent collaboration with all relevant stakeholders to map common digital competencies for the appropriate use of eHealth services:
- Share practices that can foster mutual learning from different approaches and using what has proven to be effective in terms of advancing digital competencies of the health
- Increase the digital health literacy of patients, citizens and healthcare professionals;
- Involve nurses in the innovation process, development and implementation of the evidence needed on the delivery of digital solutions before these are made available to patients and
- Accommodate changes in the delivery of care with the use of digital solutions which must be counterbalanced with cost-effective approaches to care;
- Look into digital competencies development for the nursing workforce to address the
- Consider the role of nurses in smart data design (i.e., the collecting and processing of

# **End-user co-designing EU digital** health systems

Approved by the EFN Members in October 2019, this Policy Statement presents nurses' request, as end-users, in codesigning the Digital Health Systems in the EU. Positioning nurses and nursing central to digital health policy design and ensuring that nurses can use and develop their eSkills, to their full capacity, can lead to improved citizens and patients' health and well-being, enabling the achievement of Universal Health Coverage.

# Read it here:

http://www.efnweb.be/wpcontent/uploads/EFN-Policy-Statement-on-enduser-co-designing-EU-digital-health-systems-22-10-2019.pdf

### EFN Policy Statement on End-user Co-designing EU Digital Health Systems

Nurses, as end-users, play a central role in co-designing the Digital Health Systems in the EU. Positioning nurses and nursing central to digital health policy design and ensuring that nurses can use and develop their eSkills, to their full capacity, can lead to improved citizens and patients' health and well-being, enabling the achievement of Universal Health Coverage. Health technologies and digital solutions, combined with organisational change in healthcare systems and new skills, will only be effectively and efficiently deployed with the end-user as co-designer. Therefore, within the context of the digitalisation of the EU health systems, nurses:

- Require fast and full access to Electronic Health Records (EHR) in order to be able to diagnosis, plan and care for patient in an effective and efficient way;
- Pro-actively engage in the co-design process formulating end-user requirements that guide digital development and innovation, ensuring fit-for-purpose solutions;
- Advocate for digitalisation practices and processes to mainly focus on patient safety and empowerment, improving the quality of cross-border care and interoperability through a
- Boost continuity of care throughout the patient's journey by using fit-for-purpose digital
- Deploy digital tools and systems that reduce the workload of nurses and safeguard the

It is socially and economically unsustainable to maintain the traditional vision of healthcare delivery, focused on diseases and curative approaches. Moving towards preventive care will make digital health deliver at its fullest potential, with nurses co-designing tools and programmes, facilitate access and successful deployment in the many environments in which nurses are located, including home care and nursing homes, hospitals and primary care settings. Therefore, nurses as end-users must be able to influence the development of technology reflecting both usability and user-friendliness, to deliver "fit for practice" innovative solutions to empower patients, make health systems sustainable and more accessible.

EFN Policy Statement on End-user Co-designing EU Digital Health Systems - October 2019

# The world of cloud-based services: storing health data in the cloud Paul De Raeve, 2019

This article provides an insight into the world of 'cloud'.

# Read it here:

https://www.healtheuropa.eu/cl oud-based-services-storinghealth-data-in-the-cloud/93053/

# The world of cloud-based services: storing health data in 27th August 2010

Delving into the rapidly growing industry of cloud-based services, Paul De Raeve of the European Federation of Nurses Associations (EFN), gives us an insight into the world

There is increasing interest across healthcare industries and providers on the use of cloudbased services to improve the cost-efficiency of continuity of care, with a specific focus on citizen-centred health services and systems' interoperability. As cloud computing becomes benefit from it. European Union (EU)-level deployment of these technologies has not yet taken place. The lack of an EU scalability is undermining impact on quality and safety.

In this context, this article aims at exploring the concept of 'cloud', its relationship to of the EU-level Electronic Health Records (EHR) design for integrated and cross border care, an initial mapping of currently operating healthcare clouds.

# The Blockchain Interoperability - Sharing data across the care continuum Paul De Raeve, 2019

This article provides an overview on how blockchain interoperability is enabling sharing data across the care continuum.

### BLOCKCHAIN INNOVATION

# Blockchain interoperability: Sharing data across the care continuum

Paul De Raeve, Secretary General of the European Federation of Nurses Associations (EFN) sheds lights on how blockchain interoperability is enabling sharing data across the care continuum

he interoperability of electronic health records (EHR) in Europe is key, especially now the European Commission plans to publish a recommendation on the technical specifications for an EHR exchange format. Although the EHR exchange format is part of a bigger plan of the digital transformation of the health and social care in the Digital Single Market, the EU financing of two H2020 projects, 'Smart4Health' and 'InteropEHRate' can lead to large-scale interoperable designs, especially at a time when a variety of government agencies are moving their infrastructure on to new technologies offering optimum security and data privacy. The policy outcome, adopting an EHR exchange format at EU level, could end the endless and costly interoperability discussion we have had for the last two decades. Despite some advancements towards more seamless interoperability in the healthcare sector, frontline deployment of continuity of care, based on data sharing in clinical care pathways, could benefit more from new IT developments.

Although called 'disruptive', we recognise these new systems compete for market shares struggling to make a business case for sharing the data they've gathered, sorted, collected, aggregated and secured. Therefore, it becomes key that the IT industry, the EHR vendors become connected to the frontline practitioner so products become co-designed, fit-for-purpose, reduce the endless hours nurses spend on data entry, leading to a general malaise towards software solutions that were supposed to help, but it really just means more work for the frontline. So, it becomes high time to get interoperability right!

### **Co-designing interoperable solutions**

A favourable ecosystem of trust and political support to use blockchain as a way to tackle interoperability is not the main challenge, but what we miss are the practical use cases showing blockchain works better for the frontline due to solving the interoperability challenges we currently have in the healthcare ecosystem.

It is argued that blockchain makes it possible to exchange data from different sources, in different formats, among the end-users, at their fingertips to plan and provide frontline healthcare. Within this context, nurses have an opportunity to co-design an EU interoperable EHR as end-users, respecting the existing national EHR developments. Therefore, EFN partnership in the H2020 granted EU projects focusses on co-designing a fit-for-purpose interoperable EHR, aiming to prototype:

- A citizen-centred implementation of a platform that can be integrated with a federated platform structure, easy-to-use and secure, constantly accessible and portable within any other Member States of the EU and;
- A data-driven platform to help the scientific community to benefit from the user-generated data (health, care, and health-related) going beyond the currently established interoperability level.

Nurses are in the unique and privileged position in co-designing interoperable solutions as they have direct access to the daily care needs of people and have in-depth knowledge of the patients' experiences and contextual environments in which the continuity of care takes place. As nurses are central in empowering citizens/patients to have access to health and social services, they play a significant role in addressing trust and ensure the appropriate allocation of nursing data in the EHR to facilitate continuity of care and as such, to ensure better health outcomes.

# Leveraging the trust of nurses to advance a digital agenda in Europe: a critical review of health policy literature Paul De Raeve at Al, 2021

This article is a critical and integrative review of health policy literature examining artificial intelligence (AI) and its implications for healthcare systems and the frontline nursing workforce. A key focus is on co-creation as essential for the deployment and adoption of AI.
